ANUSHA RAMACHANDRAN

Product Designer | Interaction Design & Prototyping

San Francisco, CA | (925) 750-3546 | anusharama100@gmail.com
Portfolio: anusharamachandran.com

Product designer turning complex problems into clear, thoughtful digital experiences. Combines a cognitive science background with research, visual craft, and functional prototyping across AI products, responsive websites, and cloud software. Partners closely with founders, product managers, and engineers to explore ideas, clarify trade-offs, and develop cohesive interfaces and reusable patterns.

Experience

Crusoe | Product Design Intern May 2026–Present

- Designed **first-time user workflows and empty states** for a cloud console, translating unfamiliar technical concepts into contextual guidance, clear actions, and high-fidelity interfaces.
- Created **reusable UX patterns** across pages, tables, charts, dropdowns, and modals; aligned layouts, illustrations, and microcopy with brand, technical writing, and engineering to maintain consistency.
- Explored usage and billing workflows through **interactive prototypes**; partnered with product and engineering to evaluate feasibility, technical constraints, interaction behavior, and **edge cases**.
- Conducted a **heuristic evaluation** of API key setup, node monitoring, and billing; synthesized findings into prioritized recommendations based on severity and task impact, explaining the rationale to partners.

ToniPR by TunePact | Product Designer Mar–May 2026

- Designed **responsive web journeys** across landing, pricing, authentication, onboarding, and dashboards, connecting product discovery to the signed-in customer experience.
- Designed **AI-guided interview interactions** spanning preparation, progress, completion, and recovery, using clear feedback and guidance to explain system activity and next steps.
- Partnered directly with the founder to balance **customer needs and business goals**, present design alternatives and rationale, incorporate feedback, and deliver polished Figma designs and reusable components.

Narb | Product Design Intern Jun–Sep 2025

- Led **end-to-end design** for an AI model-comparison platform, translating user research into wireframes, information architecture, interactive prototypes, and launched experiences with engineers.
- Used Cursor and Lovable to build **working React and TypeScript prototypes**, compare design alternatives, and refine onboarding and model-comparison interactions.

Selected Work

Crusoe | First-Time UX & System Feedback

- Audited empty states across cloud-console workflows and designed **reusable guidance patterns** for pages, tables, charts, dropdowns, and modals, clarifying why a surface is empty and what users can do next.

Nexus | Research Synthesis & AI Interaction Design

- Synthesized **research with 48 students** into iterations on onboarding, aggregated answers, model attribution, and feedback states; built functional prototypes to compare approaches and communicate interaction behavior.

Education

University of California, Davis Graduated March 2026
B.S. Computational Cognitive Science | Minor in Computer Science

Skills

Product design: End-to-end UX/UI, interaction design, visual design, information architecture, user flows, wireframing, high-fidelity prototyping, responsive web, native iOS/Android patterns, accessibility.
Research & collaboration: Interviews, surveys, usability testing, research synthesis, competitive analysis, heuristic evaluation, design rationale, cross-functional collaboration, developer handoff.
Systems & tools: Figma, FigJam, design systems, reusable components, Adobe Illustrator/Photoshop, Framer, Miro, **Cursor, Codex, Claude Code, Lovable**.
Development: React, Next.js, TypeScript, HTML/CSS, JavaScript, Python, SQL, Git; AI-assisted coding and functional prototypes.
